

SOLUTIONS FOR

ATRIAL FIBRILLATION

USING ACC'S QUALITY IMPROVEMENT FOR INSTITUTIONS

AFIB FACTS:

An estimated **2.7–6.1 million people in the United States have AFib**. With the aging of the U.S. population, this number is expected to increase.

Approximately **2% of people younger than age 65 have AFib**, while about **9% of people aged 65 years or older** have AFib.

African Americans are less likely than those of European descent to have AFib.

Because AFib cases increase with age and women generally live longer than men, **more women than men experience AFib**.

REGISTRIES:

- AFib Ablation Registry™
- PINNACLE Registry®

CLINICAL TOOLS:

- ASCVD Risk Estimator
- Preventing Preventable Strokes Toolkit
- AFib Toolkit
- AFib Decision Aid for Anticoagulation
