

Does “Just-In-Case” Inventory Have You Going Around in Circles?

Equipping your cath lab with appropriate quantities of the ideal types of devices and supplies is a never-ending challenge.

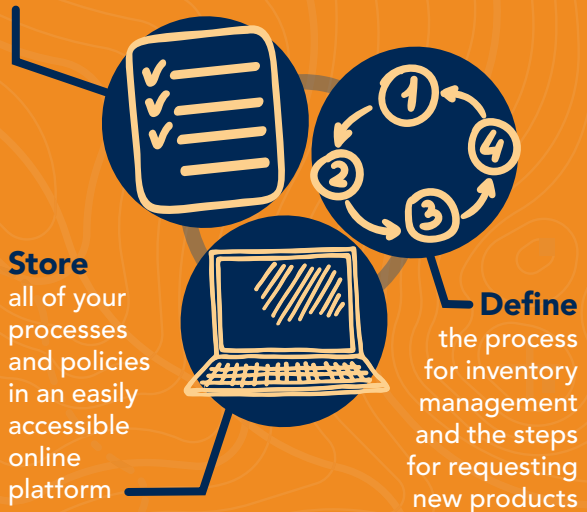

A number of factors influence how rapidly stock is depleted and what remains on shelves untouched. Carrying too much inventory can lead to expired stock that takes up valuable space and unnecessarily drains your budget. The cost of those unused materials goes beyond depleting the cath lab budget. It also costs you valuable staff time in terms of the effort needed to assess, select, order, and maintain essential items. When inventory becomes a maze of choices and complicates an already demanding and complex environment – you need to introduce processes that bring greater structure and efficiency to your lab’s inventory and supply chain management.

To improve your Cath Lab operations, you need the tool that helps standardize your purchasing and inventory policies and aids in your decision making.

Results of Accreditation

ACC’s Cardiac Cath Lab Accreditation provides the framework to fine-tune your facilities processes and workflows. The guidance and shared practices that are built-in to the accreditation tool contribute to more precise care coordination and help you:

Validate required inventory before the start of a case

Store all of your processes and policies in an easily accessible online platform

Define the process for inventory management and the steps for requesting new products

By pairing Cardiac Cath Lab Accreditation with your NCDR CathPCI Registry® metrics, your multidisciplinary team can travel the path to better outcomes, improved patient care, increased patient satisfaction, and increased ROI.
