

## Barriers and Solutions to Help Patients Keep their Follow-Up Appointment

Possible barriers to ensuring the follow-up appointment occurs should be identified in advance. Here are common barriers and possible solutions from the H2H Community. Anticipating and addressing barriers to early follow-up can help patients receive the appropriate care they need and potentially prevent them from being unnecessarily readmitted.

Common Barriers	Possible Solutions
System Barriers	
Appointment Access within 7 days	<ul> <li>Use of block scheduling to restructure appointments</li> <li>Follow-up by nurse practitioners, physician assistants, or clinical pharmacist instead of a cardiologist or primary care clinician</li> <li>Follow-up by home health service or visiting nurse association</li> <li>Development of an outpatient HF clinic or HF discharge clinic</li> <li>Hospital partnership with community physicians to prioritize discharged patients for appointments</li> </ul>
Environmental Barriers	
Transportation	<ul> <li>Provide options to patients for a follow-up setting they can most easily access</li> <li>Identify a family member or friend to transport patient to the follow-up appointment</li> <li>Provide shuttle service or a taxi voucher to patients</li> </ul>
Cost	<ul> <li>Enrollment in financial assistance program per social work</li> <li>Determine eligibility for additional financial assistance programs per hospital case managers</li> </ul>
Personal Barriers	
Patient forgets about appointment	<ul> <li>Provide an appointment card, wall-calendar, or other visual reminder with appointment time, date, and place</li> <li>Remind patient of their follow-up appointment with a phone call 24 hrs prior to appointment</li> <li>Confirm whether patient's primary support (spouse, child, friend) knows of appointment time, date, and place</li> </ul>
Patient self-care	<ul> <li>Emphasize the importance of follow-up visit in discharge process patient education</li> <li>Reinforce importance of follow-up visit within 7 days during reminder phone calls at least once after hospital discharge</li> </ul>
