

BRIDGING EMS AND HOSPITAL CARE TO ADVANCE AMI PERFORMANCE

Participating in the Chest Pain - MI Registry® connects valuable resources and supports collaboration with EMS agencies. When facilities input the *EMS NPI Number* and *EMS Run Number* as part of the data entry for the registry, it enables data sharing that benefits the facility and EMS agencies enrolled in NCDR eReports EMS.

By entering this information, facilities unlock the Intersystem Care Delivery dashboard—a powerful Chest Pain - MI Registry feature that highlights care coordination between EMS and the hospital, driving improvements across the entire system of care.

INTERSYSTEM DASHBOARD:

With the Intersystem Care Delivery dashboard, you can:

- View all EMS agencies and their key metrics at a glance
- Track your facility's performance alongside your EMS partners
- Drive meaningful collaboration to strengthen your system of care

This information also powers the NCDR eReports EMS dashboard giving EMS agencies insight into the care and outcomes of their AMI patients.
