

| Measure | Measure Title | Measure Description | Measure Type | NQS Domain | Meaningful Measure Area | Comparable PINN / DC ID |
|---------------------------------------|--|---|--------------------------|-------------------------------------|---|-------------------------|
| QPP 326 (NQF 1525) | Atrial Fibrillation and Atrial Flutter: Chronic Anticoagulation Therapy | Percentage of patients aged 18 years and older with nonvalvular atrial fibrillation (AF) or atrial flutter who were prescribed warfarin OR another FDA-approved oral anticoagulant drug for the prevention of thromboembolism during the measurement period. | Process | Effective Clinical Care | Management of Chronic Conditions | PINN-161 |
| QPP 243 (NQF 0643) | Cardiac Rehabilitation Patient Referral from an Outpatient Setting | Percentage of patients evaluated in an outpatient setting who within the previous 12 months have experienced an acute myocardial infarction (MI), coronary artery bypass graft (CABG) surgery, a percutaneous coronary intervention (PCI), cardiac valve surgery, or cardiac transplantation, or who have chronic stable angina (CSA) and have not already participated in an early outpatient cardiac rehabilitation/secondary prevention (CR) program for the qualifying event/diagnosis who were referred to a CR program. | Process High Priority | Communication and Care Coordination | Preventive Care | PINN-108 |
| QPP 47 (NQF 0326) | Advance Care Plan | Percentage of patients aged 65 years and older who have an advance care plan or surrogate decision maker documented in the medical record or documentation in the medical record that an advance care plan was discussed but the patient did not wish or was not able to name a surrogate decision maker or provide an advance care plan. | Process High Priority | Communication and Care Coordination | Care is Personalized and Aligned with Patient's Goals | PINN-14 DCR-10 |
| eCQM:CMS50v8 | Closing the Referral Loop: Receipt of Specialist Report | Percentage of patients with referrals, regardless of age, for which the referring provider receives a report from the provider to whom the patient was referred | Process High Priority | Communication and Care Coordination | Transfer of Health Information and Interoperability | |
| QPP 118 (NQF 0066) | Coronary Artery Disease: Angiotensin-Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) Therapy- Diabetes or Left Ventricular Systolic Dysfunction (LVEF < 40%) | Percentage of patients aged 18 years and older with a diagnosis of coronary artery disease seen within a 12-month period who also have diabetes OR a current or prior Left Ventricular Ejection Fraction (LVEF) < 40% who were prescribed ACE inhibitor or ARB therapy. | Process | Effective Clinical Care | Management of Chronic Conditions | PINN-107 DCR-2 |
| QPP 6 (NQF 0067) | Coronary Artery Disease: Antiplatelet Therapy | Percentage of patients aged 18 years and older with a diagnosis of coronary artery disease (CAD) seen within a 12-month period who were prescribed aspirin or clopidogrel. | Process | Effective Clinical Care | Management of Chronic Conditions | PINN-105 |
| QPP 7 (NQF 0070) | Coronary Artery Disease (CAD): Beta-Blocker Therapy – Prior Myocardial Infarction (MI) or Left Ventricular Systolic Dysfunction (LVEF < 40%) | Percentage of patients aged ≥18 years with a diagnosis of coronary artery disease seen within a 12-month period who also have prior myocardial infarction or a current or prior LVEF <40% who were prescribed beta-blocker therapy. *2 performance rates* | Process | Effective Clinical Care | Management of Chronic Conditions | PINN-106 |
| eCQM:CMS145v8 | Coronary Artery Disease (CAD): Beta-Blocker Therapy – Prior Myocardial Infarction (MI) or Left Ventricular Systolic Dysfunction (LVEF < 40%) | Percentage of patients aged ≥18 years with a diagnosis of coronary artery disease seen within a 12-month period who also have prior myocardial infarction or a current or prior LVEF <40% who were prescribed beta-blocker therapy. | Process | Effective Clinical Care | Management of Chronic Conditions | PINN-106 |

| Measure | Measure Title | Measure Description | Measure Type | NQS Domain | Meaningful Measure Area | Comparable PINN / DC ID |
|---------------------------------------|---|---|---|-------------------------|----------------------------------|-------------------------|
| | | *2 performance rates* | | | | |
| QPP 1 (NQF 0059) | Diabetes: Hemoglobin A1c Poor Control | Percentage of patients 18-75 years of age with diabetes who had hemoglobin A1c > 9.0% during the measurement period. | Intermediate Outcome High Process Inverse | Effective Clinical Care | Management of Chronic Conditions | DCR-1 |
| eCQM:CMS122v8 | Diabetes: Hemoglobin A1c Poor Control | Percentage of patients 18-75 years of age with diabetes who had hemoglobin A1c > 9.0% during the measurement period (12 months from date of encounter). | Outcome Inverse | Effective Clinical Care | Management of Chronic Conditions | DCR-1 |
| QPP 119 (NQF 0062) | Diabetes: Medical Attention for Nephropathy | The percentage of patients 18-75 years of age with diabetes who had a nephropathy-screening test or evidence of nephropathy during the measurement period. | Process | Effective Clinical Care | Management of Chronic Conditions | DCR-3 |
| eCQM:CMS134v8 | Diabetes: Medical Attention for Nephropathy | The percentage of patients 18-75 years of age with diabetes who had a nephropathy-screening test or evidence of nephropathy during the measurement period. | Process | Effective Clinical Care | Management of Chronic Conditions | DCR-3 |
| QPP 130 (NQF 0419) | Documentation of Current Medications in the Medical Record | Percentage of visits for patients aged 18 years and older for which the eligible clinician attests to documenting a list of current medications using all immediate resources available on the date of the encounter. This list must include ALL known prescriptions, over-the-counters, herbals, and vitamin/mineral/dietary (nutritional) supplements AND must contain the medications' name, dosage, frequency and route of administration. | Process High Priority | Patient Safety | Medication Management | |
| eCQM: CMS68v9 | Documentation of Current Medications in the Medical Record | Percentage of visits for patients aged 18 years and older for which the eligible clinicians attests to documenting a list of current medications using all immediate resources available on the date of the encounter. This list must include ALL known prescriptions, over-the-counters, herbals, and vitamin/mineral/dietary (nutritional) supplements AND must contain the medications' name, dosage, frequency and route of administration. | Process | Patient Safety | Medication Management | |
| QPP 8 (NQF 0083) | Heart Failure (HF): Beta-Blocker Therapy for Left Ventricular Systolic Dysfunction (LVSD) | Percentage of patients aged 18 years and older with a diagnosis of heart failure (HF) with a current or prior left ventricular ejection fraction (LVEF) < 40% who were prescribed beta-blocker therapy either within a 12-month period when seen in the outpatient setting OR at each hospital discharge. | Process | Effective Clinical Care | Management of Chronic Conditions | PINN-144 |
| eCQM:CMS144v8 | Heart Failure: Beta-Blocker Therapy for Left Ventricular Systolic Dysfunction LVSD | Percentage of patients aged 18 years and older with a diagnosis of heart failure (HF) with a current or prior left ventricular ejection fraction (LVEF) < 40% who were prescribed beta-blocker therapy either within a 12-month period when seen in the outpatient setting OR at each hospital discharge. | Process | Effective Clinical Care | Management of Chronic Conditions | PINN-144 |

| Measure | Measure Title | Measure Description | Measure Type | NQS Domain | Meaningful Measure Area | Comparable PINN / DC ID |
|---------------------------------------|--|--|------------------------------------|-----------------------------|----------------------------------|-------------------------|
| QPP 5 (NQF 0081) | Heart Failure: Angiotensin-Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) Therapy or Angiotensin Receptor-Nepilysin Inhibitor (ARNI) therapy for Left Ventricular Systolic Dysfunction (LVSD) | Percentage of patients aged 18 years and older with a diagnosis of heart failure (HF) with a current or prior left ventricular ejection fraction (LVEF) < 40% who were prescribed ACE inhibitor or ARB or ARNI therapy either within a 12-month period when seen in the outpatient setting OR at each hospital discharge | Process | Effective Clinical Care | Management of Chronic Conditions | PINN-145 |
| eQCM:CMS135v8 | Heart Failure: Angiotensin-Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) Therapy or Angiotensin Receptor-Nepilysin Inhibitor (ARNI) therapy for Left Ventricular Systolic Dysfunction (LVSD) | Percentage of patients aged 18 years and older with a diagnosis of heart failure (HF) with a current or prior left ventricular ejection fraction (LVEF) < 40% who were prescribed ACE inhibitor or ARB or ARNI therapy either within a 12-month period when seen in the outpatient setting OR at each hospital discharge | Process | Effective Clinical Care | Management of Chronic Conditions | PINN-145 |
| ACCPIN8 | Hypertension Control (Stage 1 or 2) | Proportion of patients with hypertension who had adequately controlled blood pressure. | Intermediate Outcome High Priority | Effective Clinical Care | Management of Chronic Conditions | PINN-123 |
| ACCPIN7 | Peripheral Artery Disease: Treatment of Blood Cholesterol to Reduce Atherosclerotic Cardiovascular Risk | Percentage of Patients 18-75 years of age with PAD who were offered moderate-to-high intensity statin. | Process | Effective Clinical Care | Management of Chronic Conditions | PINN-170 DCR-7 |
| ACCPIN11 | Heart Failure: Patient Self Education | Percentage of patients aged >=18 years with a diagnosis of heart failure who were provided with self-care education on >=3 elements of education during >=1 visit within a 12-month period. | Process High Priority | Community/Population Health | Management of Chronic Conditions | PINN-143 |
| QPP 441 | Ischemic Vascular Disease (IVD) All or None Outcome Measure (Optimal Control) | The IVD All-or-None Measure is one outcome measure (optimal control). The measure contains four goals. All four goals within a measure must be reached in order to meet that measure. The numerator for the all-or-none measure should be collected from the organization's total IVD denominator. All-or-None Outcome Measure (Optimal Control) - Using the IVD denominator optimal results include: <ul style="list-style-type: none"> • Most recent blood pressure (BP) measurement is less than or equal to 140/90 mm Hg -- AND • Most recent tobacco status is Tobacco Free -- AND • Daily Aspirin or Other Antiplatelet Unless Contraindicated -- AND • Statin Use Unless Contraindicated | Intermediate Outcome High Priority | Effective Clinical Care | Management of Chronic Conditions | |
| QPP 128 (NQF 0421) | Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan | Percentage of patients aged 18 years and older with a BMI documented during the current encounter or during the previous twelve months AND with a BMI outside of normal parameters, a follow-up plan is documented during the encounter or during the previous twelve months of the current encounter. | Process | Community/Population Health | Preventive Care | |

| Measure | Measure Title | Measure Description | Measure Type | NQS Domain | Meaningful Measure Area | Comparable PINN / DC ID |
|------------------------------------|---|--|--------------|-----------------------------|--|-------------------------|
| eCQM: CMS69v8 | Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan | Patients with a documented BMI during the encounter or during the previous twelve months, AND when the BMI is outside of normal parameters, a follow-up plan is documented during the encounter or during the previous twelve months of the current encounter. | Process | Community/Population Health | Preventive Care | |
| QPP 226 (NQF 0028) | Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention (AMA-PCPI) | Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within 24 months AND who received tobacco cessation intervention if identified as a tobacco user. *3 performance rates* | Process | Community/Population Health | Prevention and Treatment of Opioid and Substance Use Disorders | PINN-104 DCR-4 |
| eCQM:CMS138v8 | Tobacco Use: Screening and Cessation Intervention | Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within 24 months AND who received tobacco cessation intervention if identified as a tobacco user. *3 performance rates* | Process | Community/Population Health | Prevention and Treatment of Opioid and Substance Use Disorders | PINN-104 DCR-4 |

2020 QPP Requirements

Individual Provider Reporting: Eligible providers must report at least six measures, including one outcome measure. If an outcome measure is not available that is applicable to your specialty or practice, choose a high priority measure. Measures must be calculated with at least 70 percent of the providers patients (all-payer) included in the denominator.

Group Practice Reporting (GPRO): A group is defined as a single tax identification number (TIN) with two or more clinicians (at least one clinician within the group must be MIPS eligible) as identified by their national provider identifier (NPI), who have reassigned their Medicare billing rights to a single TIN must report at least six measures, including one outcome measure. If an outcome measure is not available that is applicable to your specialty or practice, choose a high priority measure. Measures must be calculated with at least 70 percent of the providers patients (all-payer) included in the denominator.

Measure specifications for QPP measures are available where hyperlinked. All measures are proportional, traditional (unless indicated differently under *Measure Type*) and NOT risk adjusted.
